VULNERABILITY ASSESSMENT REPORT

Future Interns – Cyber Security Internship

Prepared By:

SUDULAGUNTA SRI SAI

Task:

Task 1 – Vulnerability Assessment Report for a Live Website

Target Website:

http://testphp.vulnweb.com

Tools Used:

Nmap, OWASP ZAP

Date: 07-05-2026

INTRODUCTION :

This report presents the results of a vulnerability assessment conducted on the target web application using Nmap and OWASP ZAP. The purpose of this assessment was to identify potential security weaknesses, analyze associated risks, and recommend remediation measures to improve the security posture of the application.

OBJECTIVE :

The objective of this assessment is to identify common web application vulnerabilities, classify their severity, and provide practical remediation recommendations to enhance security.

TOOLS USED

Tool	Purpose
Nmap	Network reconnaissance and port scanning
OWASP ZAP	Web vulnerability assessment
Browser DevTools	Browser inspection

METHODOLOGY :

The assessment was conducted using passive scanning and reconnaissance techniques. Nmap was used to identify host availability and network exposure, while OWASP ZAP was used to analyze web application security headers, cookie configurations, and information disclosure issues.

NMAP SCAN RESULTS :

Observation:

The target host was reachable during the assessment. All scanned TCP ports were reported as filtered, indicating the presence of firewall or packet filtering mechanisms.

RISK ANALYSIS TABLE :

Finding	Risk Level	Description
Filtered TCP Ports	Informational	Firewall filtering detected
Host Reachable	Informational	Publicly accessible server

OWASP ZAP FINDINGS

1. Cross-Domain Misconfiguration

Risk Level

Medium

Description

Improper cross-domain configuration may allow unauthorized domains to access sensitive resources.

Recommendation

Implement strict cross-origin resource sharing (CORS) policies.

Cross-Domain Misconfiguration

Risk Level

Medium

Description

Improper cross-domain configuration may allow unauthorized domains to access sensitive resources.

Recommendation

Implement strict cross-origin resource sharing (CORS) policies.

---

2. Cookie No HttpOnly Flag

Risk Level

Medium

Description

Cookies without the HttpOnly attribute may be accessed through client-side scripts.

Recommendation

Enable the HttpOnly flag for sensitive cookies.

---

3. Cookie Without Secure Flag

Risk Level

Medium

Description

Cookies transmitted without the Secure attribute may be exposed over unencrypted connections.

Recommendation

Enable the Secure flag for all authentication cookies.

---

4. Private IP Disclosure

Risk Level

Low

Description

Internal IP addresses were exposed in server responses.

Recommendation

Avoid exposing internal infrastructure information publicly.

---

5. Server Version Disclosure

Risk Level

Low

Description

The server discloses version information through HTTP response headers.

Recommendation

Hide unnecessary server version details.

---

6. Strict-Transport-Security Header Missing

Risk Level

Medium

Description

The application does not enforce secure HTTPS communication using HSTS headers.

Recommendation

Configure Strict-Transport-Security headers.

---

7. X-Content-Type-Options Header Missing

Risk Level

Medium

Description

The browser may incorrectly interpret content types, increasing security risks.

CONCLUSION :

The vulnerability assessment identified multiple low and medium risk security issues related to cookie security, HTTP headers, and information disclosure. Implementing the recommended remediation measures will significantly improve the security posture of the web application.

SCREENSHOTS :
